

- Activate users easy and quickly
- Product includes several verifying methods
- High availability solution
- Mobile apps included
- Easy to install and integrate

Authentication Services

Clavister EasyAccess

Introducing Clavister EasyAccess delivering secure access to all your applications with flexible multi-factor authentication (MFA) and identity federation (Web SSO).

This enables organizations to implement strong authentication, single sign-on for web and mobile applications regardless where the user is located or what device they are using. Passwords are simply not enough to protect access to sensitive data that is vital to your organization.

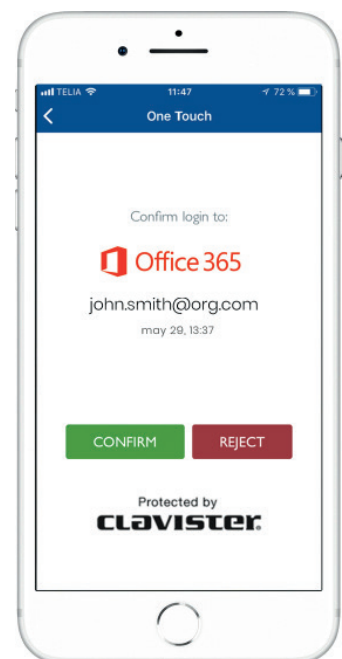

Multi-factor authentication can be achieved by combining **something you know** (password or PIN), **something you have** (token or smart card) or **something you are** (biometrics).

Clavister offer a number of different authentication methods to add a second layer of security to sign-in to an application or service. To lower cost and simplify activation of MFA for users, we provide both self-service and delegated administration.

OneTouch

User friendly mobile app to verify that you are who you say you are. The Clavister One Touch is included in the offering.

Challenges we solve

Clavister EasyAccess provides a solution to add a single point of authentication. End users login only once using a strong authentication method and get access to all their applications.

Secure access

Securing access to corporate networks, protecting the identities of users, and ensuring that the users are who they claim to be is vital for any organization. With the increasing use of cloud applications and mobile devices while at the same time reducing costs are challenges many organizations face today.

Integrations

By integrating your existing solutions with Clavister EasyAccess you can easily add strong multi-factor authentication and simplify login user experience. With our flexible API's it is also possible to add above to your custom applications.

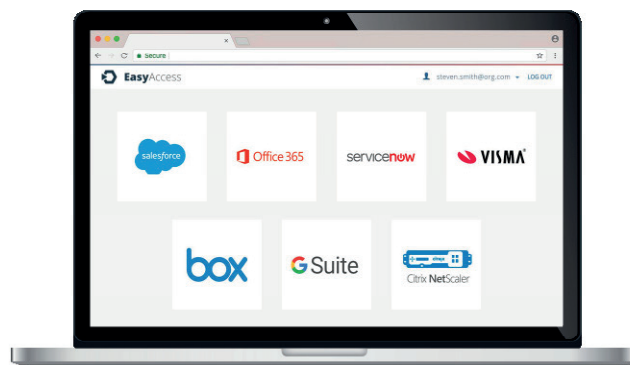

High availability

Redundant and scalable for high availability with clustering functionality and can be delivered in form of virtual appliance. The virtual appliance allows customer deploying Clavister EasyAccess services more quickly, streamline management and administration tasks.

Built on an optimized operating system and using well known and proven technologies the new virtual appliances reduce the cost of owning and operating software and is a central building block creating service delivery platform for future customer needs.

Managed Security Service Providers (MSSP)

Clavister EasyAccess deliver orchestration capabilities with API configuration to meet high demand from managed security service providers (MSSP).

#NoBackDoors and Third-party Access Restriction

Clavister hereby certifies that Clavister products do not contain any "backdoors", meaning that there are no mechanisms deliberately incorporated that would allow a company or an organization to access or control a Clavister product without prior acceptance from the administrator of the product in question.
